EST4300 Smart Pressure Transmitter GP/AP

Brief Introduction

EST4300 Smart Pressure Transmitter GP/AP is microprocessor-based measuring instrument. Connected with only one side process impulse line, EST4300 GP/AP type measures the pressure with reference to barometric pressure.

EST4300 GP/AP adopts the Metallic Capacitance Sensing Technology which is the new generation of Smart Capacitance GP/AP/DP/HP developed by Eastsensor, for which Eastsensor owns independent intellectual property rights.

With digital compensation technology compensating for temperature and static pressure, the Metallic Capacitance Sensors can remarkably improve the measurement accuracy and effectively reduce the temperature drift. In this regards, the Metallic Capacitance Sensors have been darling the Smart Pressure Transmitter market due to long-term stability, high reliability, self-diagnostic capability as well as excellence cost performance.

EST4300 Smart Pressure Transmitter - GP/AP

Technical Performance

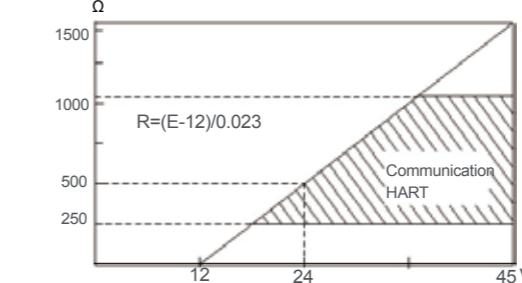

Service: Liquid, Gas, Vapor Applications

Range: Refer to below Order Procedure

Output Signal: 4~20mA (Two-wire), HART Protocols

Power Supply: External: 24V dc; Range: 12V~45V

Load:

Locations: ExdIIBT5Gb for Explosion-Proof
ExialICT4/T5/T6Ga for Intrinsic Safe

Zero shift: At minimum span, the maximum positive zero shift is 0.975 (39/40) of URL, the maximum negative zero shift could be the LRL. (After positive/negative shift, neither the URL nor the LRL may exceed the limits of the span no matter what the output is)

Temp. Limits: Electronics Temperature Operating Limits: -40~85°C; Sensing Element Operating Limits: -40~10°C;
Memory Temperature: -40~85°C; Digital Display: -20~75°C; -40~85°C; Memory Temperature: -40~85°C; Digital Display: -20~75°C (normal operating); -40~85°C (Non Destructive)

Humidity: 0~95%

Overpressure: Range 3-8: 0 (Absolute pressure)~13.78 MPa
Range 9: ≤31.29 MPa

Volumetric: ≤0.16 cm³

Damping: 0.2~32.0s

Technical Data

Accuracy : ±0.1%, ±0.075%

Stability: Maximum Span ±0.15%12months(exclude other ambient effects)

Temperature Effect: Zero Temperature Error per 55°C = ±0.25 of Maximum Span; Total Temperature Error per 55°C (Zero and Span)= ±0.5% of URL; ±0.2% of URL@20°C

Power Supply Effect: ≤±0.005% /V

Vibration effect: For vibration of 200Hz in any axis, the error caused is ±0.05%/g of the maximum span

Load Effect: No load effects in the working area when voltage transferred to transmitter is higher than 12V

Mounting position Effect: Zero shifts up to 0.25kPa, which can be calibrated out. No span effect

Electromagnetic Radiation : Conform to IEC801 standards

Application & Order Procedure

EST4300 Smart Pressure Transmitter, which is compatible with HART 475 field communicator, is the one of the most popular industry process measuring instruments, and is used to measure the level, density, and pressure of liquid, gas, and steam, converts it to 4-20mA signal outputs.

Order Procedure

Model	Pressure Type			
EST4300 GP	Smart Pressure Transmitter

EST4300 SMART Pressure/absolute Pressure Transmitter

EST4300T (In-Line) Smart Pressure Transmitter GP/AP

Brief Introduction

EST4300T Smart Pressure Transmitter GP/AP type adopts the piezoresistive sensing method; the piezoresistive effect in silicon is due primarily to changes at the atomic level and is approximately two orders of magnitude larger than in metals¹. As stress is applied, the average effective mass of the carriers in the silicon either increases or decreases (depending on the direction of the stress, the crystallographic orientation, and the direction of current flow).

This change alters the silicon's carrier mobility and hence its resistivity. When piezoresistors are placed in a Wheatstone bridge configuration and attached to a pressure-sensitive diaphragm, a change in resistance is converted to a voltage/current output which is proportional to the applied pressure.

EST4300T (In-Line) Smart Pressure Transmitter GP/AP

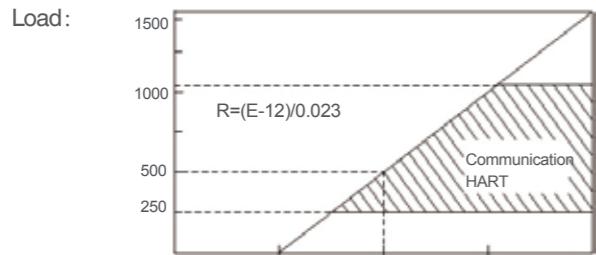

Technical Performance

Service: Liquid, Gas, Vapor Applications

Range: Refer to below Order Procedure

Output Signal: 4~20mA (Two-wire), HART Protocols

Power Supply: External: 24V dc; Range: 12V~45V

EST4300 SMART Flange Mounted Liquid Level Transmitter

EST4300 Smart Flange Mounted Level Transmitter

Brief Introduction

EST4300 Smart Flange Mounted Pressure Transmitter - LT is microprocessor-based measuring instrument. Connected with one or two sides process impulse line, EST4300 Flange Mounted type measures the pressure with reference to barometric pressure.

Based on the regular model of EST4300 GP/AP/DP, the LT type is designed, with one or two diaphragm seal as wetted parts, to measure the pressure in some special cases such as high temperature, medium easy to solidify and tend to be crystallized and viscous or the medium has chemical corrosivity and other circumstance that strict sanitation terms are requested.

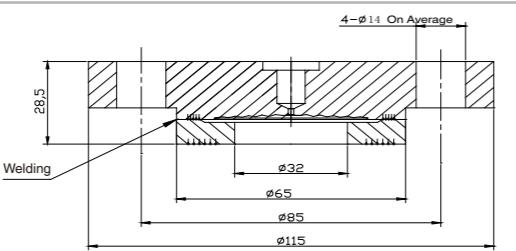

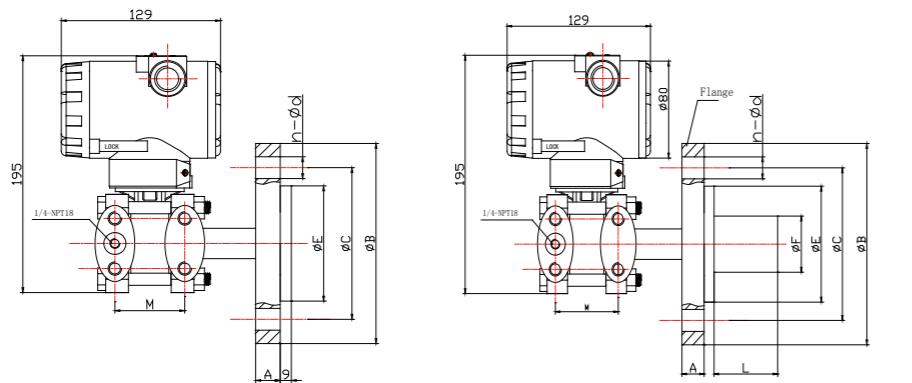

The basic sensing element of EST4300 LT type is the same as EST4300 GP/AP/DP, however the response time will be a little bit longer when the Capillary is more than 3 meter long.

SMART In-Line Type Pressure/Level Transmitter

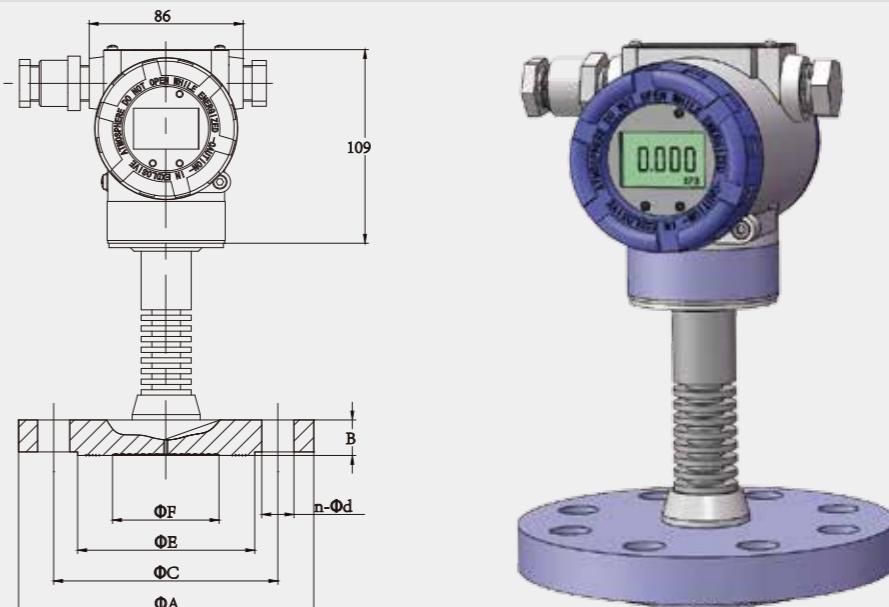

EST4300T Smart Level Transmitter

Brief Introduction

As the economic and affordable version of EST4300 LT, EST4300T LT, the in-line type Smart Pressure Transmitter is suitable for measuring the process when the Gage and Absolute pressure range is wide. With only one process side connected by Flange, the in-line type with compact design allows the transmitter to be connected directly to a process for quick, easy and cost effective installation.

EST4300T LT is designed, with one diaphragm seal as wetted parts, to measure the pressure in some special cases such as high temperature, medium easy to solidify and tend to be crystallized and viscous or the medium has chemical corrosivity and other circumstance that strict sanitation terms are requested.

The basic sensing element of EST4300T LT is the same as EST4300T GP/AP, however the response time will be a little bit longer when the Capillary is more than 3 meter long. (EST4300 LT type is strongly recommended when the measuring pressure less than 4KPa)

SMART Flange Screw Mounted Liquid Level/Pressure Transmitter

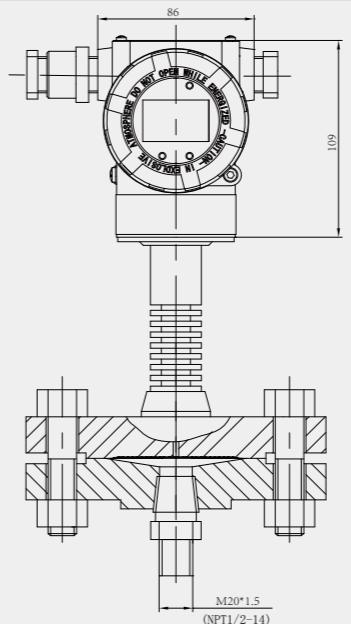

EST4300T Smart Flange Screw Level Transmitter

Brief Introduction

EST4300T FLT, the in-line type Smart Level /Pressure Transmitter is suitable for measuring the process when the Gage and Absolute pressure range is wide, and the pressure rating is high. With only one process side connected by Flange Screw, the in-line type with compact design allows the transmitter to be connected directly to a process for quick, easy and cost effective installation.

EST4300T FLT is designed, with one diaphragm seal as wetted parts, to measure the pressure in some special cases such as high temperature, medium easy to solidify and tend to be crystallized and viscous or the medium has chemical corrosivity and other circumstance that strict sanitation terms are requested.

The basic sensing element of EST4300T FLT is the same as EST4300T GP/AP, however the response time will be a little bit longer when the Capillary is more than 3 meter long. (EST4300 LT type is strongly recommended when the measuring pressure less than 4KPa)

EST4300(T) Smart Remote Diaphragm Seal Pressure/Level Transmitter

Brief Introduction

EST4300 Remote Diaphragm Seal RG (Remote Gauge) and RD (Remote Differential) is used where to keep the isolating diaphragm out of direct contact with the process liquid and to prevent the process from the sensor module; for EST4300T, it only has RG (Remote Gauge) type.

With the same technology and specifications EST4300 GP/DP, EST4300 RG/RD Smart Pressure Transmitter is a little bit weakened in measurement accuracy and response time.

Besides, as the capillary length is over 10m, special attention must be paid to the installation position to ensure the pressure tested is within the measuring scope of the basic sensing element;

Due to the nature of hydrostatic level monitoring, medium density should be known for an accurate level measurement. For most cases, the measurement process can be performed with EST4300 GP/DP types; however, for any of the following situations, EST4300 RG/RD or EST4300T RG shall be considered to use.

- Where the process medium are prone to solidifying or crystallizing
- Where the process medium are too thick or contains suspended solid and can easily block the impulse piping
- Where the process medium s are hot or corrosive, and cannot be measured directly
- Where the process medium are food or other materials that cannot be contaminated
- Where the process medium

Before model select and order procedure, the measured Medium Temperature, Corrosivity, Pressure Range, Ex-Proof requirement, must clearly be aware of. The Flange mounting or Remote Diaphragm Seal is strongly recommended when the medium tend to be crystallized and viscous.

EST4300 SMART Hygienic Tri Clamp Pressure Transmitter

EST4300T Smart Hygienic Tri-Clamp Seal (SCW) PT/LT

Brief Introduction

EST4300T SCW type is suitable for Hygienic industry where the high standard of health and hygiene is requested. With reference to barometric pressure or the tank pressure, EST4300T SCW is designed to measure the process pressure of Tank or Pipe line via Hygienic Tri-Clover Style Tri Clamp Seal. The height of the liquid can be measured precisely by the variation of output signal.

The basic sensing element of EST4300T SCW is the same as EST4300T GP/AP.

EST4300T SMART
SLS Dairy Process Connection -Female Thread
Pressure Transmitter

EST4300T Smart Dairy Process-Female Thread Seal (SLS) PT/LT

Brief Introduction

EST4300T SLS is suitable for Diary Process where the high standard of health and hygiene is requested. With reference to barometric pressure or the tank pressure, EST4300T SLS is designed to measure the process pressure of Tank or Pipe line via Female Thread Seal. The height of the liquid can be measured precisely by the variation of output signal.

The basic sensing element of EST4300T SLS is the same as EST4300T GP/AP.

EST4300 SMART
Hygienic Tank Spud Seal
Pressure Transmitter

EST4300 Smart Hygienic Tank Spud Seal (SSW) PT/LT

Brief Introduction

EST4300 SSW is suitable for Hygienic industry where the high standard of health and hygiene is requested. With reference to barometric pressure or the tank pressure, EST4300 SSW is designed to measure the process pressure of Tank or Pipe line via Hygienic Spud Seal. The height of the liquid can be measured precisely by the variation of output signal.

The basic sensing element of EST4300 SSW is the same as EST4300 GP/AP.

EST4300 Smart Hygienic Tank Spud Seal (SSW) PT/LT

Specification of SSW

Pipe Size	OD	O-Ring	Diaphragm Diameter	Code
1.5-in	50.4	44	31	A1
2-in	64	56	43	A2
2-in (Plug-in)	64	56	43	A3

Order Procedure of SSW

Model	Seal Type
EST4300	Hygienic Tank Spud Seal

EST4300 SMART High Temperature Pressure Transmitter

EST4300 Smart High Temperature Pressure Transmitter

Brief Introduction

Eastsensor has been always dedicating to develop the new methods to handle the process measuring when medium temperature is remarkably high. The regular ways of temperature cooling, for example, are increasing the length of capillary, adopting heat radiator or spacer fluid, using high temperature silicone oil or sensor like sapphire, all such behaviors can effective work well in case of temperature below 300 °C.

How can do when the temperature more than 300 °C or even 400 °C ? EST4300 HT type can provide with the best solutio

EST4300 Smart High Temperature Pressure Transmitter

**EST4300T SMART
Battery Power Supply
Pressure Transmitter GP/AP**

EST4300T Smart Battery Power Supply (BPS) PT

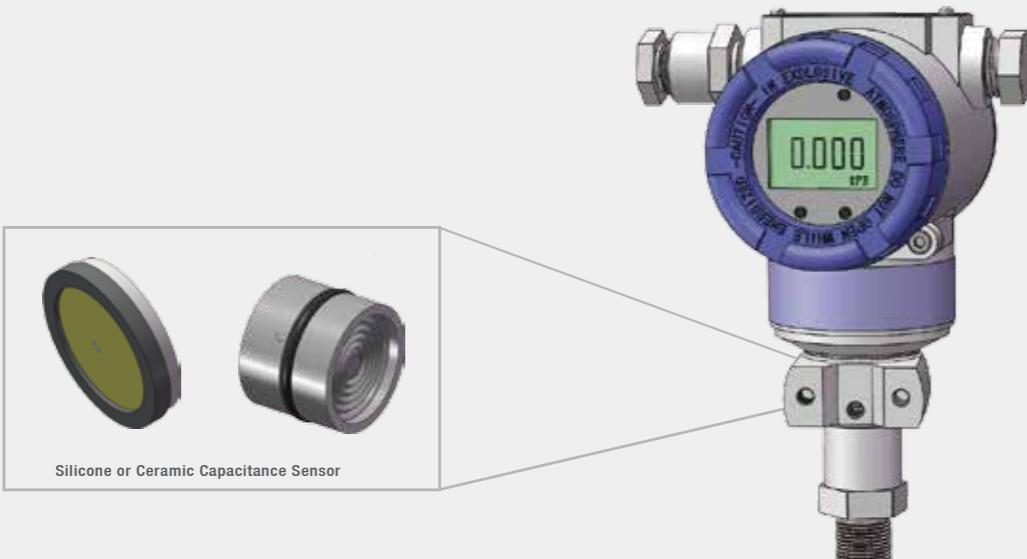

Brief Introduction

As an upgraded version of EST4300T series, the BPS model can work ceaselessly in case of 24Vdc power off, BPS model only have Gauge and Absolute Pressure type.

The unique trait of BPS model is it can not only monitor the pressure change but also the voltage of power supply, it can switch to battery supply if any abnormal of direct current power has been detected. When the BPS model activated, the current output has been suspended automatically, the transmitter only show current status of pressure.

The BPS model can serve well especially under the condition of remote outskirts areas where stable DC power supply are not available, it can also switch to DC power supply automatically when 24Vdc become stable and workable, in case of that, the battery power supply will be suspended accordingly and the battery turn to recharge itself from DC power to keep it alive always.

The diaphragm adopts the integrated circuit which the linear and temperature compensation have been included, so the excellent accuracy and stability can be expected even under the situation of harsh industry environment.

EST4300T Smart Battery Power Supply (BPS) Pressure Transmitter

Technical Performance

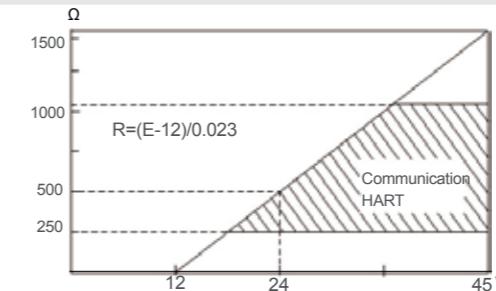

Service: Liquid, Gas, Vapor Applications

Range: Refer to below Order Procedure

Output Signal: 4~20mA (Two-wire), HART Protocols

Power Supply: External: 24V dc Or 3.6V Lithium Battery/ Ni-Mh Battery Pack, power range 3.6V~36V

Load:

Locations: ExdIIBT5Gb for Explosion-Proof
ExialICT4/T5/T6Gc for Intrinsic Safe

Zero Shift: At minimum span, the maximum positive zero shift is 0.975 (39/40) of URL, the maximum negative zero shift could be the LRL. (After positive/negative shift, neither the URL nor the LRL may exceed the limits of the span no matter what the output is)

Temp. Limits: Electronics Temperature Operating Limits: -40~85°C Sensing Element Operating Limits: -40~104°C; Memory Temperature: -40~85°C Digital Display: -20~75°C (normal operating); -40~85°C (Non Destructive)

Humidity: 0~95%

Overpressure: 2X~5X

Volumetric: ≤0.16 cm³

Damping: 0.2~32.0s

Booting Time : 3s , no warming up

Technical Data

Accuracy : ±0.1%, ±0.2%

Stability: Maximum Span ±0.25%6months

Temperature Effect: Max ±0.2%/20°C

Power Supply Effect: ≤±0.005% /V

Vibration effect: For vibration of 200Hz in any axis, the error caused is ±0.05%/g of the maximum span

Load Effect : No load effects in the working area when voltage transferred to transmitter is higher than 12V

Mounting position Effect: Zero shifts up to 0.25kPa, which can be calibrated out. No span effect

Electromagnetic Radiation : Conform to IEC801 standards

Application & Order Procedure

EST4300T Smart Pressure Transmitter, which is compatible with HART 475 field communicator, is the one of the most popular industry process measuring instruments, and is used to measure the level, density, and pressure of liquid, gas, and steam, converts it to 4-20mA signal outputs.

Order Procedure

Note:

Before model select and order procedure, the measured Medium Temperature, Corrosivity, Pressure Range, Ex-Proof requirement, must clearly be aware of. The Flange mounting or Remote Diaphragm Seal is strongly recommended when the medium tend to be crystallized and viscous.
